## SUMMARY

Application Developer with hands-on experience in Flutter and Android (Kotlin and Flutter), working on applications involving Bluetooth communication and audio features. I enjoy building reliable, real-world solutions and focusing on clean, maintainable code. Comfortable working across both UI and system-level components, with a strong interest in how mobile apps interact with devices.

## EDUCATION

**Guru Gobind Singh Indraprastha University**

**2022 – 2026**

*Bachelor of Technology in Artificial Intelligence and Data Science*

*7.1*

## TECHNICAL SKILLS

**Languages:** Dart, Kotlin, Java

**Mobile Development:** Flutter, Android (Kotlin), Firebase (backend), Jetpack Compose

**Bluetooth:** BLE, Classic Bluetooth, device discovery, connection, reconnection

**Audio:** AudioManager, media playback, volume control

**System:** Services, Broadcast Receivers

**Architecture:** MVVM, Clean Architecture (basic understanding)

**Core Concepts:** Object-Oriented Programming (OOPs), Data Structures & Algorithms

**Tools:** Git, GitHub, Postman, Android Studio

## EXPERIENCE

**Picturetimedigiplex pvt. ltd.**

**Feb 2026 – May 2026**

*Full stack developer (Android and Web)*

*Delhi, India*

- Worked on cinema ticket booking application focusing on seat selection and booking flow
- Collaborated with senior developers to implement seat mapping and row-based ticket selection
- Developed and maintained web portal using Next.js with dashboard features for event management and category-based filtering
- Implemented "Collaborate with Us" form with data capture, Excel export, and API integration

**Knowledge Excel Private Limited**

**Aug 2025 – Oct 2025**

*Generative AI Intern*

*Delhi, India*

- Worked on Python-based backend tasks involving generative AI and LLM-based applications
- Assisted in building chatbot workflows using LangChain and LangGraph for conversational interactions
- Explored Retrieval-Augmented Generation (RAG) using vector databases (Chroma) and embedding-based retrieval
- Used Pydantic for data validation and followed coding standards and version control practices in team environment

## PROJECTS

**Smart Bluetooth Audio Controller App**

[GitHub](#)

- Built Flutter application integrated with native Android (Kotlin) for Bluetooth communication
- Implemented BLE device discovery, connection, and basic reconnection handling
- Worked with GATT services for real-time device interaction
- Handled audio routing and volume control between Bluetooth devices and mobile

**Spotify Clone (Music Streaming App)**

[GitHub](#)

- Developed music streaming application using Flutter with playlist, album, and playback features
- Implemented state management using Riverpod for handling UI state and playback control
- Integrated audio playback with play, pause, and seek functionality
- Focused on responsive UI design and smooth navigation across screens

## ACHIEVEMENTS

**Hackathon Awards**

**2021–2023**

*3+ Wins Including 3rd & 1st Place*

*Various Locations*

- Placed 3rd at Hackunicorn Hackathon (June 2023) for building a web app for caterers with AI chatbot integration, handling both frontend and backend development.

**Professional Development Projects**

**2024–Present**

*Freelancer & Open Source Contributor*

*Remote/GitHub*

- Completed 3+ freelance projects ngo website for moksh foundation and company website and dashboards for startups like GenSync and Brat and also for Picturetime (sub company).
